

Postdoctoral Fellowship Biosketch Example

BIOGRAPHICAL SKETCH

Provide the following information for the Senior/key personnel and other significant contributors.
Follow this format for each person. DO NOT EXCEED FIVE PAGES.

NAME: Gopher, Goldy

eRA COMMONS USER NAME (credential, e.g., agency login): GopherG

POSITION TITLE: Postdoctoral Researcher

EDUCATION/TRAINING

| INSTITUTION AND LOCATION | DEGREE | START DATE | END DATE | FIELD OF STUDY |
|---|-----------------------|------------|----------|-------------------------------|
| University of Minnesota, Minneapolis | BS | 08/1995 | 05/1999 | Engineering |
| University of Minnesota, Minneapolis | PHD | 08/2001 | 09/2007 | Molecular Biology |
| University of Minnesota, Minneapolis | NIH training grant | 09/2007 | present | Bioinformatics/Im munology |

A. Personal Statement

My long-term research interests involve the development of a comprehensive understanding of key developmental pathways and how alterations in gene expression contribute to human disease. My academic training and research experience have provided me with an excellent background in multiple biological disciplines including molecular biology, microbiology, biochemistry, and genetics. As an undergraduate, I was able to conduct research with Dr. Xavier Factor on the mechanisms of action of a new class of antibiotics. As a predoctoral student with Dr. Tanti Auguri, my research focused on the regulation of transcription in yeast, and I gained expertise in the isolation and biochemical characterization of transcription complexes. I developed a novel protocol for the purification for components of large transcription complexes. I was first author of the initial description of the Most Novel Complex. A subsequent first author publication challenged a key paradigm of transcription elongation and was a featured article in a major journal. During my undergraduate and graduate careers, I received several academic and teaching awards. For my postdoctoral training, I will continue to build on my previous training in transcriptional controls by moving into a mammalian system that will allow me to address additional questions regarding the regulation of differentiation and development. My sponsor Dr. I.M. Creative is an internationally recognized leader in the transcription/chromatin field and has an extensive record for training postdoctoral fellows. The proposed research will provide me with new conceptual and technical training in developmental biology and whole genome analysis. In addition, the proposed training plan outlines a set of career development activities and workshops – e.g. grant writing, public speaking, lab management, and mentoring students – designed to enhance my ability to be an independent investigator. My choice of sponsor, research project, and training will give me a solid foundation to reach my goal of studying developmental diseases in man. During my second postdoctoral year in Dr. Creative's lab my father had a severe stroke that eventually ended his life. I was out of the lab for six months dealing with my father's incapacitating illness and end-of-life issues. This hiatus in training reduced my scientific productivity.

B. Positions and Honors

Positions and Employment

1999 - 2001 Engineer, The IBeam Group
 2007 - 2007 Postdoctoral Researcher, UC San Diego
 2008 - Postdoctoral Researcher, Michigan State University

Other Experience and Professional Memberships

1997 - Member, Sigma Xi
 2000 - Member, Association for Women in Science
 2002 - Member, National Society for Bioinformatics and Biotechnology

Honors

1995 - 1997 Scholarship, Daughters of Hawaii Society
 1995 - 1999 Scholarship, National Merit Scholarship Program
 1999 Paula F. Laufenberg award for best senior project in the Department of Engineering, Swarthmore College
 1999 B.S. awarded with high honors, Swarthmore College
 2001 STAR award for public service in engineering, The IBeam Group
 2002 - 2005 Predoctoral Fellowship for Minorities, Ford Foundation

C. Contribution to Science

1. **Early Career:** My early career contributions were focused on applying my knowledge of structural engineering to improving the design and integrity of tensile structures. More specifically, I worked with a team of engineers at the IBeam Group to develop concrete with a higher tensile strength that could be utilized in large structures such as suspension bridges. My particular role in the project was to identify candidate polymers, determine the ultimate tensile strength of these polymers, and make recommendations as to which polymer would afford concrete the most structural integrity under various stresses.

 - b. Gopher G, Janessa AJ. Redesigning the Golden Gate bridge. *National Undergraduate Symposium on Science and Engineering*; 1998; Baltimore, MD. c1998.
2. **Graduate Career:** My graduate research contributions focused on transcriptional gene regulation in *Saccharomyces cerevisiae*. Results from my research were highly relevant as they provided new details into the workings of complex biological systems, and allowed for further extrapolations into the development of certain diseases and their progression. I originally developed a novel protocol for the purification for components of large protein complexes. A subsequent publication, in which I isolated and characterized a long sought after transcription complex, challenged a key paradigm of transcription elongation and was a featured article in a major journal.

 - d. Gopher G, Auguri T. A tandem affinity purification tag approach allows for isolation of interacting proteins in *Saccharomyces cerevisiae*. *Proceedings of the National Academy of Sciences of the United States of America*. 2004; 98:151.
3. **Postdoctoral Career:** As a postdoctoral fellow, my research has provided a compelling link between mutations arising in stress response proteins and the development of various autoimmune diseases in humans. Previous studies have shown dysregulation in the innate immune response lead to autoimmune diseases in humans. A few Rtc homologues have now been identified in humans and appear to play a role in the regulation of genes in the innate immune response. My research is focused on the transcriptional regulator Rtc from *Drosophila melanogaster*.

D. Additional Information: Research Support and/or Scholastic Performance
Scholastic Performance

| YEAR | COURSE TITLE | GRADE |
|--------------------------------------|------------------------------------|-------|
| University of Minnesota, Minneapolis | | |
| 2001 | Seminar in Genetics | P |
| 2002 | Statistics for the Life Sciences | P |
| 2003 | Ethics in Biological Research | CRE |
| 2004 | Seminar in Physiology and Behavior | P |

Except for the scientific ethics course, University of Minnesota, Minneapolis graduate courses are graded P (pass) or F (fail). Passing is C plus or better. The scientific ethics course is graded CRE (credit) or NC (no credit). Students must attend at least seven of the eight presentation/discussion sessions for credit.
